Model 1000

GAS OPERATED 20 GA. AUTOLOADING SHOTGUN OPERATION AND MAINTENANCE MANUAL

THE SMITH & WESSON MODEL 1000

The Smith & Wesson Model 1000, gas operated, autoloading shotgun has been designed and manufactured to provide many years of outstanding performance. This Manual has been prepared so that any owner of a S & W Model 1000 will be able to have a better understanding of the proper care and routine maintenance of his new Smith & Wesson and as a result, enjoy the total satisfaction of his purchase. If there are any questions concerning material in this Manual, please contact the source from whom the S & W Model 1000 was purchased or any qualified gunsmith.

ASSEMBLY — (FIG. 1)

The S & W Model 1000 is carefully prepared for shipment in a polystyrol bed which has been inletted to receive the barrel and the action (together with stock and fore-end) as two separate components. In order to assemble:

1. Remove the action group from the box, push safety button #69 to "on" position, (red indicator not showing) and unscrew the fore-end cap (#110) by turning counter-clockwise.
2. With the butt plate (#118) placed on a non-skid surface, carefully slide the fore-end (#102) upward and off the magazine tube (#21). Pull the operating handle (#66) to the rear until the breech bolt (#35) locks in the open (most rearward) position.
3. After removing the barrel (#2) from the box and with the butt placed on a non-skid surface, position the barrel guide ring (#7) over the magazine tube.
4. Then carefully slide the barrel guide ring over the magazine tube while aligning the barrel breech with the barrel slot in the receiver (#9). When properly aligned, the barrel should insert easily into receiver. If a bind is noted, remove the barrel and repeat the above with more careful attention to the alignment of barrel to the barrel slot in the receiver.
5. Slide the fore-end over the magazine tube until the diagonal end of the fore-end is securely positioned against the receiver. Approximately $\frac{5}{8}$ " of the threaded portion of the magazine tube will then be exposed beyond the front end of the fore-end.
6. Firmly thread on the fore-end cap (clockwise) until it is snug against the fore-end. There should be no looseness in the fore-end.

Caution: In order to avoid possible damage to the receiver, always restrict the free forward motion of the breech bolt when the barrel is not installed. This can be done by maintaining a rearward pressure on the operating handle while releasing the bolt by depressing the bolt release button. Be sure to keep fingers away from the ejection port.

DISASSEMBLY

1. Pull the operating handle to the rear until the breech bolt locks in the open position.
2. Check to see that the chamber and magazine tube are empty.
3. Remove the fore-end cap by twisting counter-clockwise.
4. While holding the barrel firmly into the receiver, slide the fore-end off the magazine tube.
5. While comfortably gripping the stock or pistol grip, carefully withdraw barrel breech from the receiver and slide the barrel guide ring off the magazine tube.

LOADING — (FIG. 1)

1. With the Model 1000 fully assembled, push the Safety button (#69) from the left side (for right-handed shooters) which will place the gun in a "Safe" condition. (See Safety section page 5).
2. While pointing the gun in a safe direction, pull the operating handle to the rear until the breech bolt locks in the open position.
3. Load the first shotshell through the open ejection port. This can be done directly into the chamber or by laying the shell on the carrier (#88).
4. If you have physically chambered the first round, merely depress the breech bolt release button to close the breech bolt, being careful to keep your fingers away from the ejection port. If the first round is resting on the carrier, depress the breech bolt release button with the left hand and the first round will be chambered by the forward motion of the breech bolt.
5. To load the next shell, turn the gun so that the trigger guard is facing up. Depress the breech bolt release button and simultaneously depress the carrier with the front end of the shell and push the shell fully into the spring loaded magazine tube until the shell stopper plate (#17) is perfectly latched.
6. Two additional shells can be loaded in the same manner as described in (5) above. However, if the magazine capacity reducing pin (#28) is utilized, the magazine capacity is restricted to two rounds.

Caution: The Model 1000 should be loaded only in the hunting field or on the range. When it is removed from its carrying case, the operating handle should be locked in the open position until the gun is to be loaded.

MODEL 1000 PARTS LIST

Subject to change without notice F.O.B. Springfield, Ma.

When ordering part, please include Model No., Serial No., Part No. and Description.

LOADED VIEW

UNLOADING

1. The Safety button should be on "Safe". (See Safety Section Page 5).
2. Pull the operating handle to the rear and in so doing, one shell will be ejected through the ejection port. Allowing the bolt to close will place another shell in position to be extracted.
3. The gun will be emptied by repeating the above operation until the operating handle locks in the rearward position.
4. Be doubly safe and at this time, check both the chamber and the magazine tube for any remaining shells.

SAFETY

1. The Safety button is located to the rear of the trigger (#77) so that the shooter can quickly recognize by sight or feel, whether the "Safety" is on or off.
2. For the right handed shooter, the Safety button is set in the "on" or "safe" position by pushing the button from the left side so that it protrudes on the right side.
3. When pushed from the right side, the Safety button is set in the "off" or "fire" position and protrudes on the left side and shows a red stripe.

NOTE: Even when not in use, it is a good safety practice to have the Safety button set in the "safe" position.

TO CONVERT SAFETY FROM RIGHT HAND TO LEFT HAND OPERATION:

1. Follow instructions to remove Trigger Plate Assembly, (Cleaning of Trigger Plate Assembly Page 5).
2. **CAUTION:** Remove Safety button spring stop pin (#72). The Safety button spring may eject when the drift punch is removed from the Safety button pin hole.
3. Remove Safety button spring (#71) and Spring Sleeve (#70).
4. Remove Safety button (#69) and turn end-for-end (red indicator now should be on right side of receiver) and replace with the double machine cut facing the Safety button spring sleeve hole.
5. Replace Safety button spring sleeve with open end up, spring and spring stop pin.
6. Replace trigger plate assembly.

NOTE: When replacing Trigger Plate Assembly, be sure Bolt Release Button is depressed.

FIGURE 2

CHANGING MAGAZINE CAPACITY — (FIG. 2)

Each S & W Model 1000 is assembled with a magazine capacity of 2 rounds. Magazine capacity may be increased to 3 rounds as follows:

1. Open Breech Bolt, Remove Fore-End Cap, Fore-End and Barrel.
2. Drive out the Magazine Capacity Reducing Pin (#28) with force applied from the solid end of the pin. This will allow the Magazine Spring (#24) and Magazine Follower (#23) to work its full length.
3. To reduce the magazine capacity to 2 rounds again, merely return the Magazine Reducing Pin, this time, driving it from the split end

CLEANING OF THE GAS CYLINDER — (FIG. 2)

The routine cleaning of the gas cylinder will insure the smoothness of its motion and maintain the maximum operational performance of the Model 1000.

1. Move the Operating Handle to the open and locked position.
2. Remove Fore-End Cap, Fore-End and Barrel.
3. Remove the Piston Connector Ring (#52) from its slot in the Piston Connector Ring (#51). Either remove the ring spring completely or relocate the ring spring to either of the adjacent, larger slots. Later production guns have no external piston connector ring spring. The piston pin is retained by a spring within the piston.

SPECIAL NOTE: Release of the bolt, after the piston connector ring has been removed may allow the bolt and carrier assembly to move forward, partially out of the receiver and in doing so, disconnect the links from the action spring guide.

4. Push out and remove the Piston Pin (#50). A ball point pen point or any small diameter blunt object will suffice as the pusher "tool".
5. Slide the Piston Connector Ring from the Magazine Tube.
6. Withdraw the Pressure Compensator Valve Assembly (#44) and the Piston (#49) from the Cylinder (Magazine Tube). The removal of these parts may be assisted by applying pressure through any one of the 3 vent slots in the side of the Magazine Tube.
7. Clean the inside of the Cylinder with a brass cleaning brush and any commercial gun solvent. Complete the cleaning operation with a dry patch.
8. Clean both the Compensator Valve and Piston as in (6) above.
9. Insert the piston into the cylinder (Magazine Tube) with the end having the piston pin holes to the rear and with the gas port at the top (barrel side) of the tube.
10. Insert the pressure compensator valve into the cylinder with the solid end face down.
11. Make sure piston holes are clearly visible through vent slots.
12. Slide Piston Connector Ring over the Magazine Tube.
13. Align piston holes and piston connector ring holes and insert Piston Pin.
14. Align piston pin slot with piston connector ring slots and reposition ring spring into center piston connector ring slot.

FIELD CLEANING OF THE GAS CYLINDER

If unusually dirty conditions prevail or an unusual amount of shooting has been done since the last cleaning and the Model 1000 becomes sluggish operationally or ejection patterns become erratic, the following field cleaning should suffice until the cleaning procedure noted previously is convenient:

1. Move the Operating Handle to the open and locked position.
2. Remove Fore-End Cap, Fore-End and Barrel.
3. Grip the Piston Connector Ring and reciprocate the piston through its full stroke until the movement is smooth which indicates that cylinder contamination has been cleaned by the piston's edge.

CLEANING OF TRIGGER PLATE ASSEMBLY

1. Push out Trigger Plate Pins (#100, #101) with Drift Punch. (FIG. 1)
2. Remove Trigger Plate Assembly (#67).
3. Trigger (#77), Safety Button (#69), Hammer

- (#85), Carrier Assembly (#87) and Sear (#73) are assembled in Trigger Plate (#68).
4. Clean the Trigger Plate Assembly with cleaning oil and dry thoroughly.
 5. Lubricate with gun oil.
 6. When replacing Trigger Plate into Receiver, be sure Bolt Release Button is depressed and

Trigger Plate Pin Bushings are centered. If binding occurs, it is also helpful to have cocked the hammer (#85). If proper alignment of Trigger Plate Pin Holes is difficult to achieve, a slight movement of the Breech Bolt will be of help.

7. Replace Trigger Plate Pins.

GUNSMITH ONLY

Disassembly and Cleaning of Breech Bolt Assembly:

1. Remove Fore-End Cap, Fore-End and Barrel.
2. Remove Trigger Plate Assembly (#67).
3. Remove Piston Connector Ring (#51) as previously mentioned as well as Pressure Compensator Valve Assembly (#44) and Piston (#49).
4. Remove Operating Handle from Breech Bolt (#35) after aligning its position with the middle notch in the breech bolt way.
5. While depressing the Bolt Release Button, hold Action Bar Sleeve Assembly (#53) and push forward. The entire breech bolt group will then be pushed out of the receiver.
6. Clean each part with cleaning oil, wipe dry and lubricate with gun oil and reassemble Breech Bolt Assembly in the following sequence.

- a. Breech Bolt (#35)
- b. Locking Block (#43)
- c. Links (#63 and #64)
- d. Link Pin (#65) and insert Assembly partially into Receiver.
- e. Breech Bolt Base (#59).
- f. Attach Action Bars (#56 and #57) to Action Bar Sleeve (#54) and slide over Magazine Tube.
- g. Mate Action bars to Breech Bolt Base (#59) and continue to insert into the Receiver.

NOTE: Be sure that mated ends of the links are inserted into the Action Spring Guide (#31).

7. Replace Bolt handle, into the Breech Bolt.
8. Replace Trigger Assembly.
9. Reassemble gas system.

INSTRUCTIONS FOR ORDERING PARTS

When ordering parts, please give the following information:

1. Model number of the firearm.
2. Serial number of the firearm.
3. Gauge and choke of the firearm.
4. Part name and number of the part required.

Please order parts separately from factory repair service as delivery may be delayed.

Send your order to:

Smith & Wesson
2100 Roosevelt Ave.
Springfield, MA 01101
Attn: Parts Department

INSTRUCTIONS FOR FACTORY SERVICE

Should your Smith & Wesson long gun require adjustment, repair, or refinishing, we recommend most sincerely that the weapon be returned to the factory. There is no other way to insure that the work will be done in a properly equipped and staffed shop.

Charges are very reasonable, being based on the cost of parts replaced plus a labor charge for the time expended on the job. A labor charge for one hour is usually sufficient to cover all but very extensive overhaul jobs.

Long guns returned to the factory should be **MARKED FOR THE ATTENTION OF THE SERVICE DEPARTMENT**. A letter of instructions should be enclosed with the gun, and shipment by individuals must be Prepaid. Adherence to these suggestions will prevent loss of time in handling at the factory.

When your Long gun arrives for service, it will be very carefully inspected, together with your letter of instructions. Next, a quotation covering total cost of work to be performed will be sent to you. No actual work will be connected before receiving your approval of our quotation unless you specifically authorize us to do so.
